Bookmarks for the recent and most important disasters, including third parties

### News from GDACS community

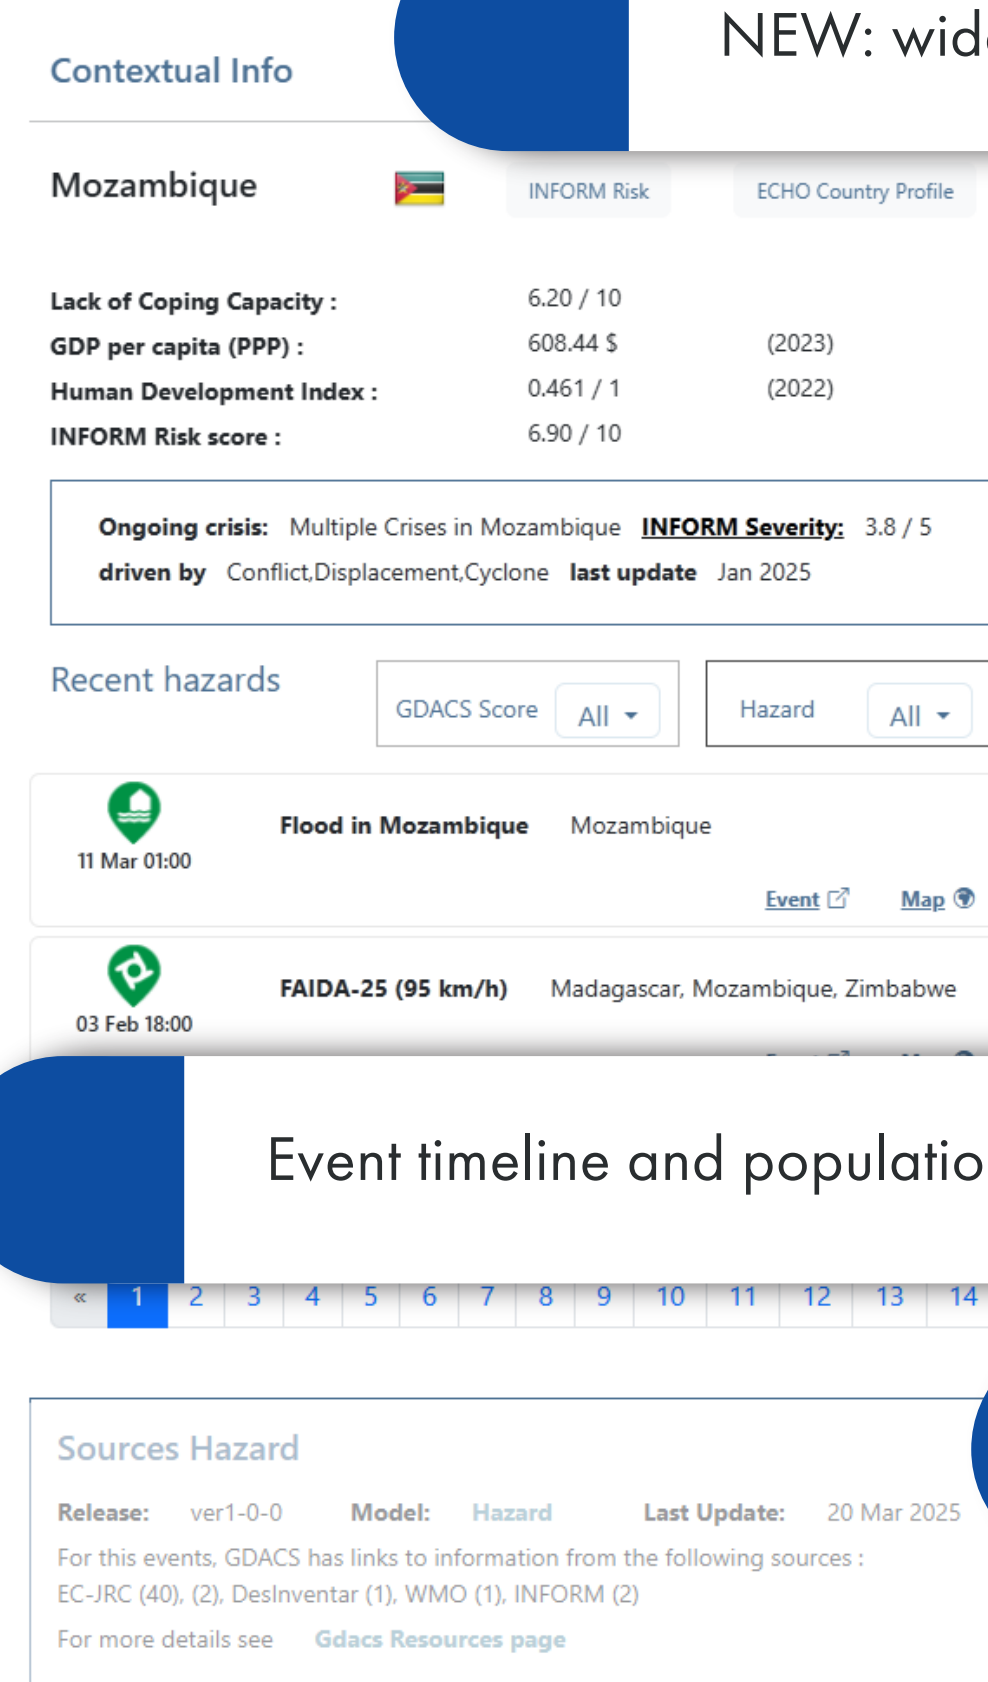

Single dynamic map for all geospatial data

Key comprehensive info about a (potential) disaster

Data products dedicated to the event

NEW: wider country context for vulnerability and other hazards

Event timeline and population exposed

Additional resources for internal or external content, metadata, references

### GOALS

- Rationalise and condense content
- Refresh & modernize interface
- Improve the existing
- Add new features and expand content
- Further integration of VOSOCC and SMCS components

### FEATURES

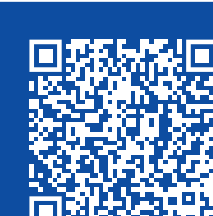

- High modularity and dashboard-like
- Allows data extraction / download
- More evidence for forecasts / anticipatory content
- Can reach all content in max 3 clicks
- Mobile friendly (responsive)
- All maps in a single interactive and dynamic frame

### IMPLEMENTATION CRITERIA

- Build on users' requirements
- Don't disrupt user experience / workflow too much
- Don't leave out existing features
- Incremental and agile implementation
- Progressive deployment during 2025 in line with capabilities
